Let NAC Stoller nuclear fuel experts help you meet your fuel performance goals for 2010 and beyond

- Fuel design reviews and evaluation tools to help identify design weaknesses and the potential for performance issues
- Fuel manufacturing reviews to identify critical attributes, evaluate inspection effectiveness, and assess equipment process capability using Six Sigma and other statistical techniques
- Independent evaluations and interpretation of healthy and failed fuel PIE information, and recommended actions
- Training in fuel design, manufacturing, performance, operation, materials, irradiation effects, mechanical modeling, corrosion, RCS chemistry and crud effects

What's in your tank?
